

Advanced Julia Workshop

Carsten Bauer @ University of Cologne, October 2019

How good are you at programming? A CEFR-like approach to measure programming proficiency

Raphael 'kena' Poss

A1 level

B1 level

Programming skills self-assessment matrix

		A1 Basic User	A2 Basic User	B1 Intermediate User	B2 Intermediate User	C1 Proficient User	C2 Proficient User
Writing	Writing code	I can produce a correct implementation for a simple function, given a well-defined specification of desired behavior and interface, without help from others.	I can determine a suitable interface and produce a correct implementation, given a loose specification for a simple function, without help from others. I can break down a complex function specification in smaller functions.	I can estimate the space and time costs of my code during execution. I can empirically compare different implementations of the same function specification using well-defined metrics, including execution time and memory footprint. I express invariants in my code using preconditions, assertions and post-conditions. I use stubs to gain flexibility on implementation order.	I use typing and interfaces deliberately and productively to structure and plan ahead my coding activity. I can design and implement entire programs myself given well-defined specifications on external input and output. I systematically attempt to generalize functions to increase their reusability.	I can systematically recognize inconsistent or conflicting requirements in specifications. I can break down a complex program architecture in smaller components that can be implemented separately, including by other people. I can use existing (E)DSLs or metaprogramming patterns to increase my productivity.	I can reliably recognize when under-specification is intentional or not. I can exploit under-specification to increase my productivity in non-trivial ways. I can devise new (E)DSLs or create new metaprogramming patterns to increase my productivity and that of other programmers.
	Refactoring	I can adapt my code when I receive small changes in its specification without rewriting it entirely, provided I know the change is incremental. I can change my own code given detailed instructions from a more experienced programmer.	I can determine myself whether a small change in specification is incremental or requires a large refactoring. I can change my own code given loose instructions from a more experienced programmer.	I can derive a refactoring strategy on my own code, given relatively small changes in specifications. I can change other people's code given precise instructions from a person already familiar with the code.	I can predict accurately the effort needed to adapt my own code base to a new specification. I can follow an existing refactoring strategy on someone else's code. I can take full responsibility for the integration of someone else's patch onto my own code.	I can reverse-engineer someone else's code base with help from the original specification, and predict accurately the effort needed to adapt it to a new specification.	I can reverse-engineer someone else's code base without original specification, and predict accurately the effort needed to adapt it to a new specification.

Workshop Schedule

	Monday	Tuesday	Wednesday	Thursday	Friday
9:30 - 11:30 (2h)	Types + Dispatch	Environments + Julia Gotchas	Parallel Computing		
		Short break			
11:45 - 12:45 (1h)	Custom types	Linear Algebra			Holiday
		Lunch break			Hackathon + MiniWorkshops
14:00 - 16:00 (2h)	Specialization + Generic Prog.	Machine Learning (Physics)	Tips&Tricks + Ecosystem

Workshop materials

Terminal

```
git clone https://github.com/crstnbr/julia-workshop-2019
```

```
cd julia-workshop-2019
```

```
julia install_dependencies.jl
```

Workshop materials

Julia REPL

```
using Pkg  
Pkg.GitTools.clone("http://tiny.cc/julia", "workshop")  
cd("workshop")  
include("install_dependencies.jl") # might take a while
```

Browser

Download <https://github.com/crstnbr/julia-workshop-2019/archive/master.zip>

Unzip the file.

Open the Jupyter notebook `install_dependencies.ipynb` and execute the cells.

What does science need from a programming language?

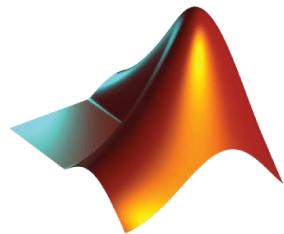

Easy to write and read !

Fast and scalable !

Interactive !

There's a plethora of programming languages

MATLAB

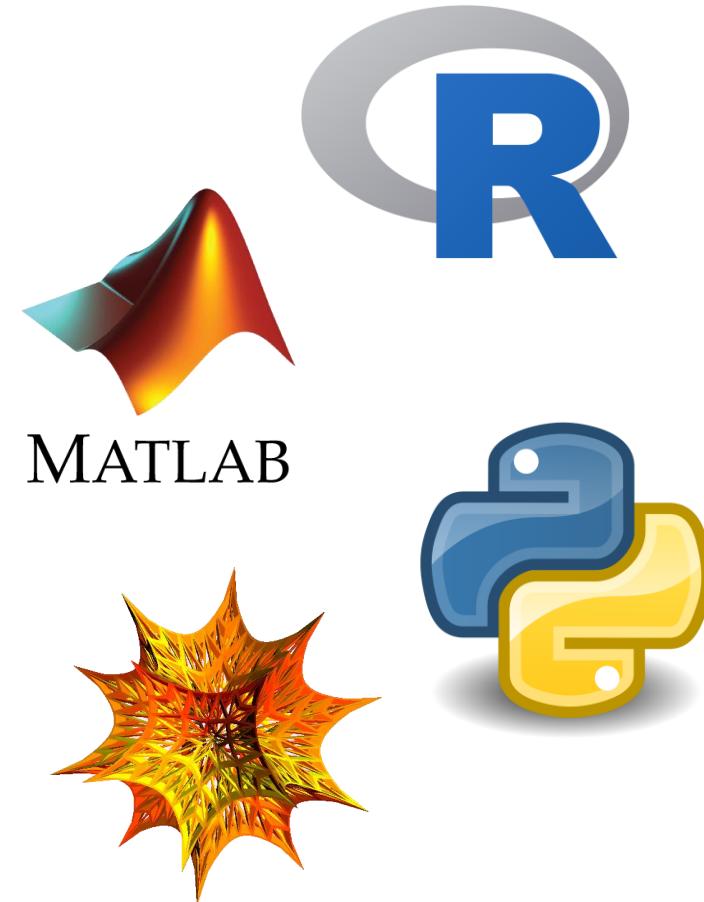

Fortran

There's a plethora of programming languages

Fortran

There's a plethora of programming languages

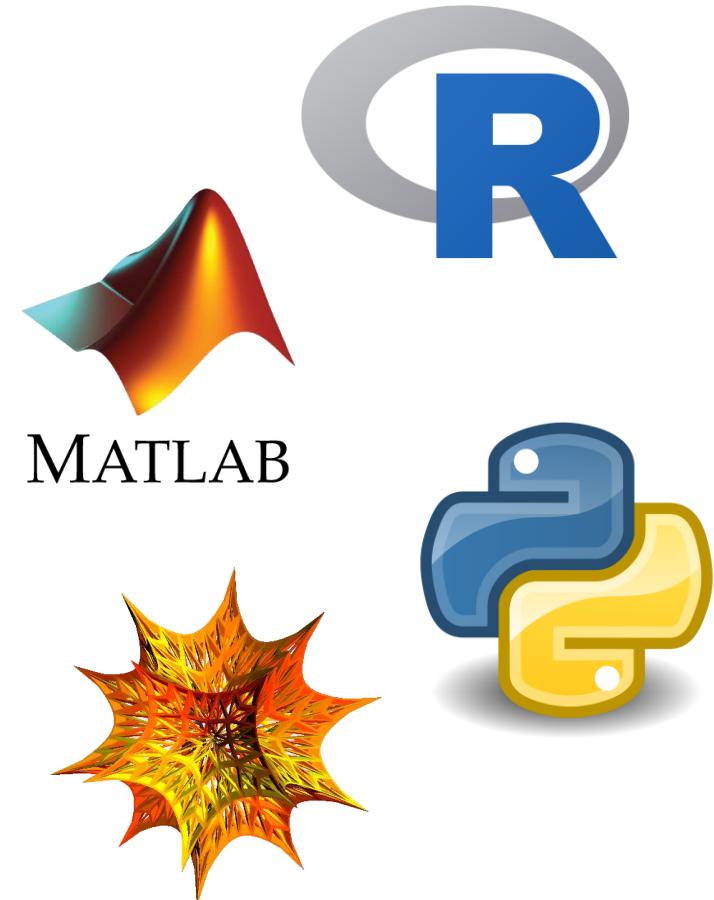

Fortran

Fast

Slow(ish)

There's a plethora of programming languages

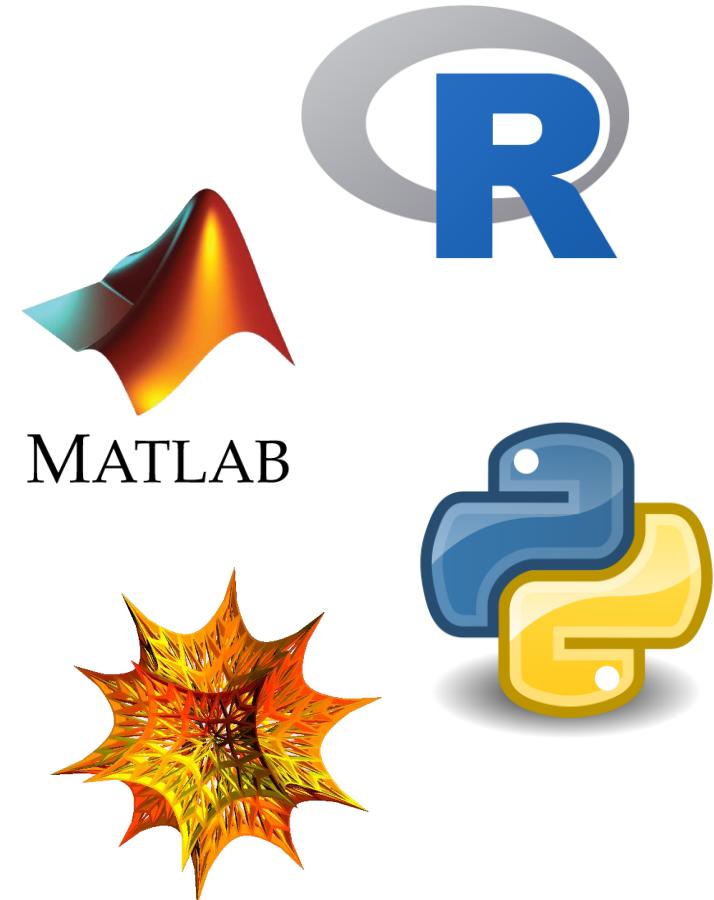

Fortran

Compiled

Interpreted

There's a plethora of programming languages

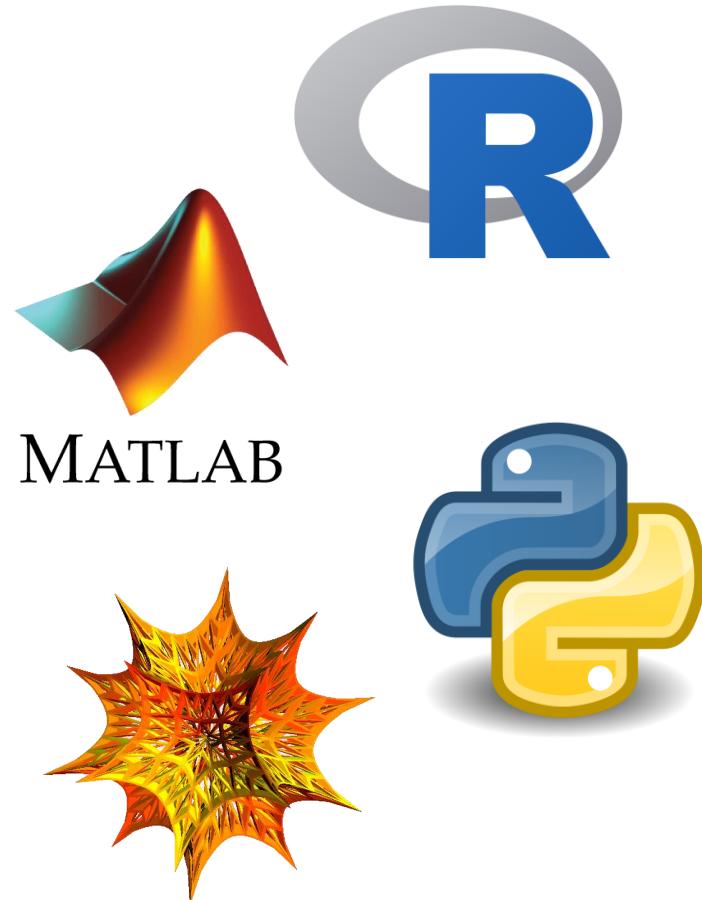

Fortran

Static

Dynamic

There's a plethora of programming languages

“Feels like Python, runs like C”

The unification

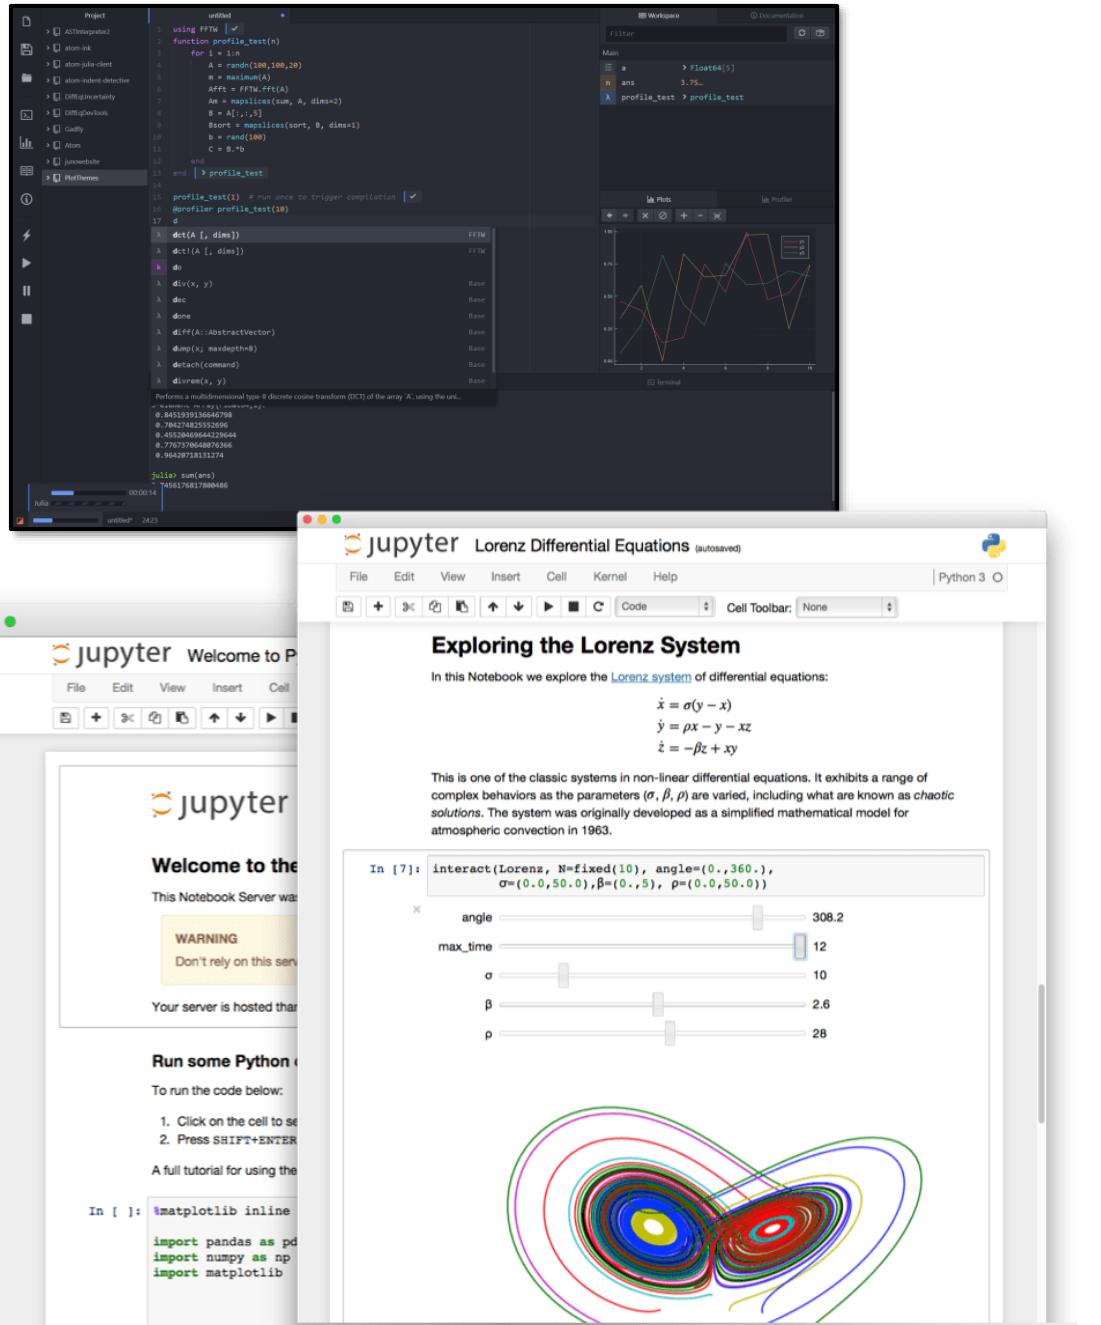

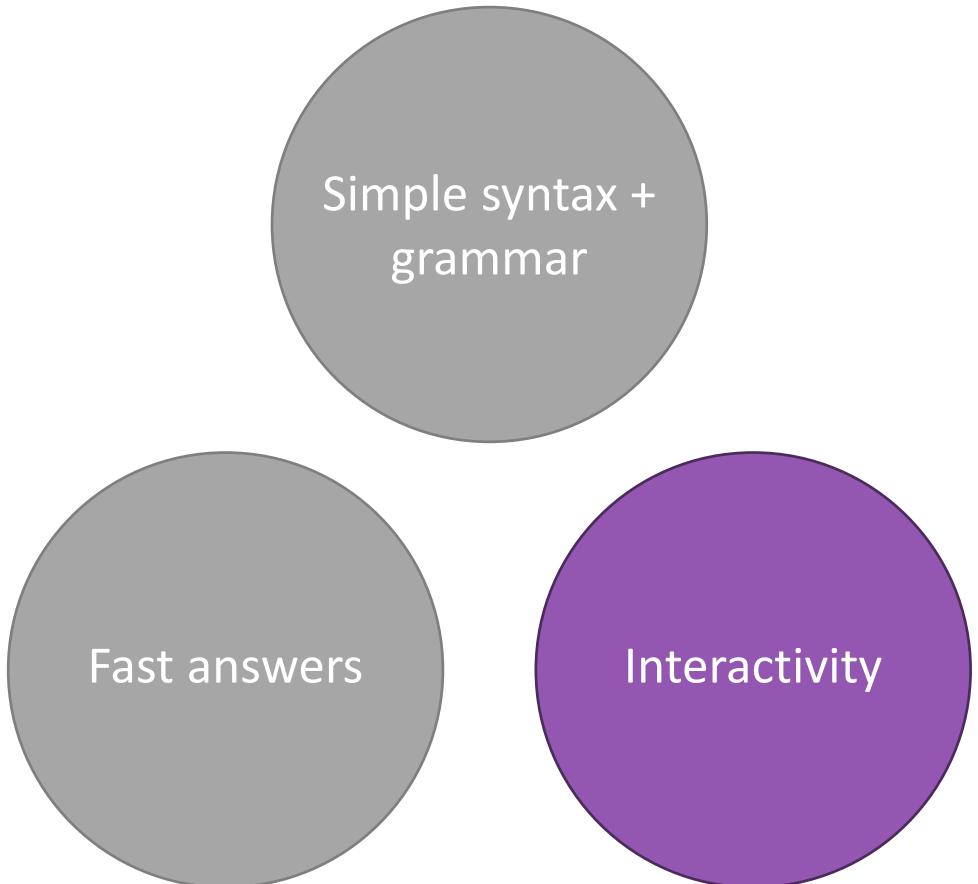

The unification

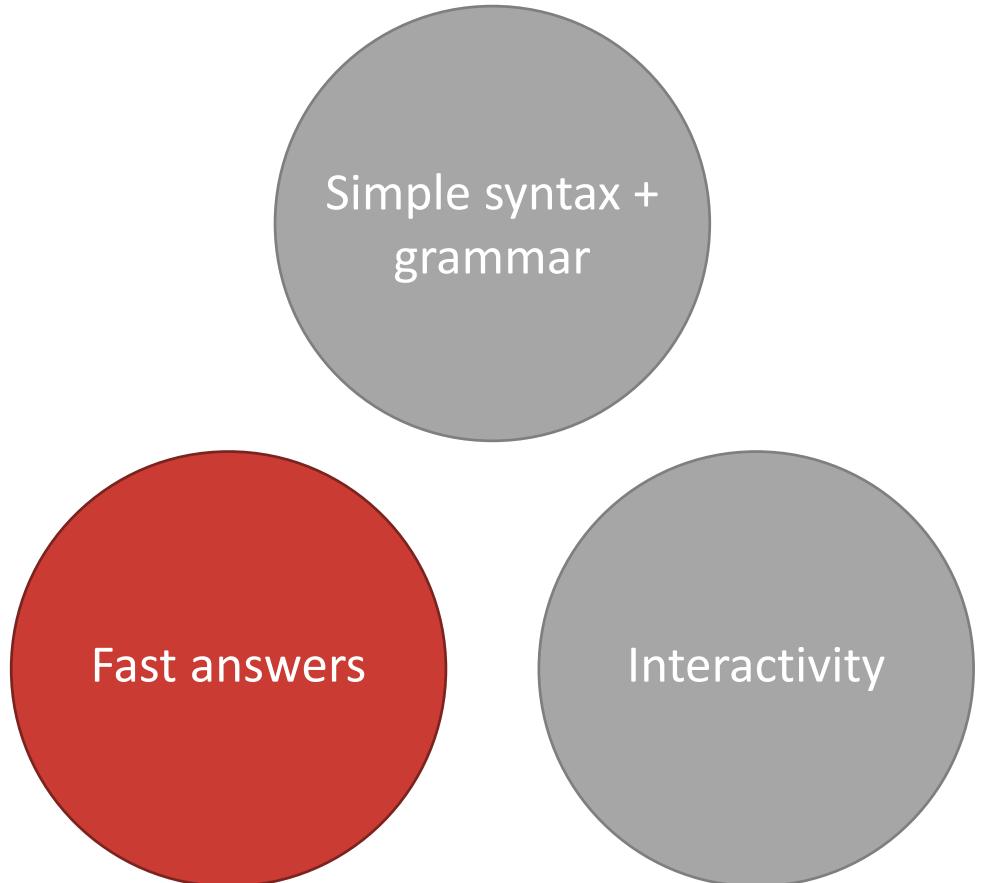

```
function babylonian(α; N = 10)
    @assert α > 0 "α must be > 0"
    t = (1+α)/2
    for i = 2:N
        t = (t + α/t)/2
    end
    t
end

babylonian(π) ≈ √π
```

The **julia** unification

The unification

```
julia> function sumup()
           x = 0
           for i in 1:100
               x += i
           end
           x
       end
sumup (generic function with 2 methods)
```

```
julia> @code_llvm debuginfo=:none sumup()

; Function Attrs: uwtable
define i64 @julia_sumup_12626() #0 {
top:
    ret i64 5050
}
```

Just returns the answer!
(The for loop was compiled away)

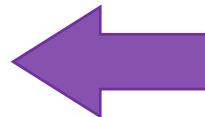

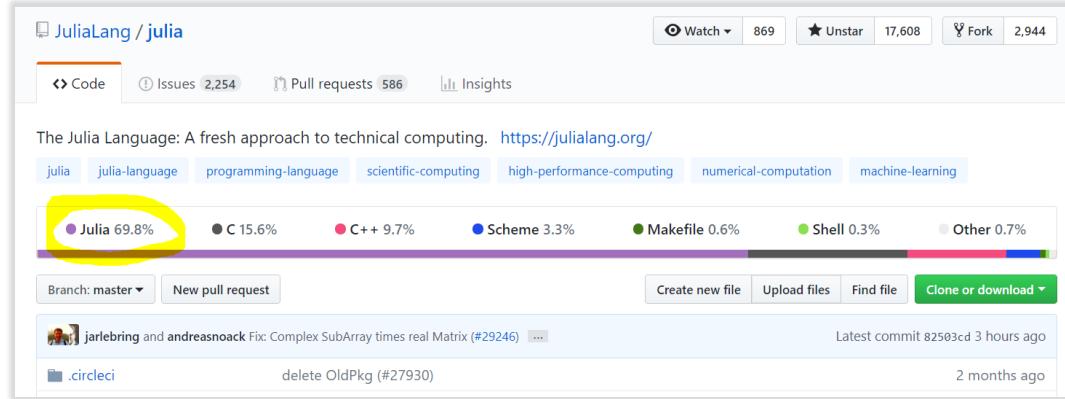

It is free and open source

Screenshot of the JuliaLang/julia GitHub repository page.

The page shows the following details:

- Repository:** JuliaLang/julia
- Watched:** 869
- Unstarred:** 17,608
- Forked:** 2,944
- Code:** 2,254 issues, 586 pull requests, Insights
- Tags:** julia, julia-language, programming-language, scientific-computing, high-performance-computing, numerical-computation, machine-learning
- Languages:** Julia 69.8%, C 15.6%, C++ 9.7%, Scheme 3.3%, Makefile 0.6%, Shell 0.3%, Other 0.7% (The "Julia" entry is highlighted with a yellow oval).
- Branch:** master
- Actions:** New pull request, Create new file, Upload files, Find file, Clone or download
- Recent Activity:**
 - jarlebring and andreasnoack Fix: Complex SubArray times real Matrix (#29246) ... Latest commit 82503cd 3 hours ago
 - .circleci delete OldPkg (#27930) 2 months ago

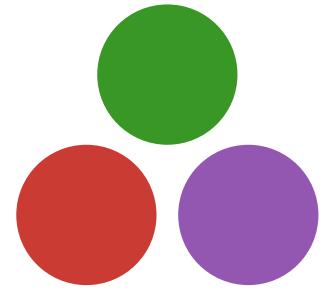

It is inviting

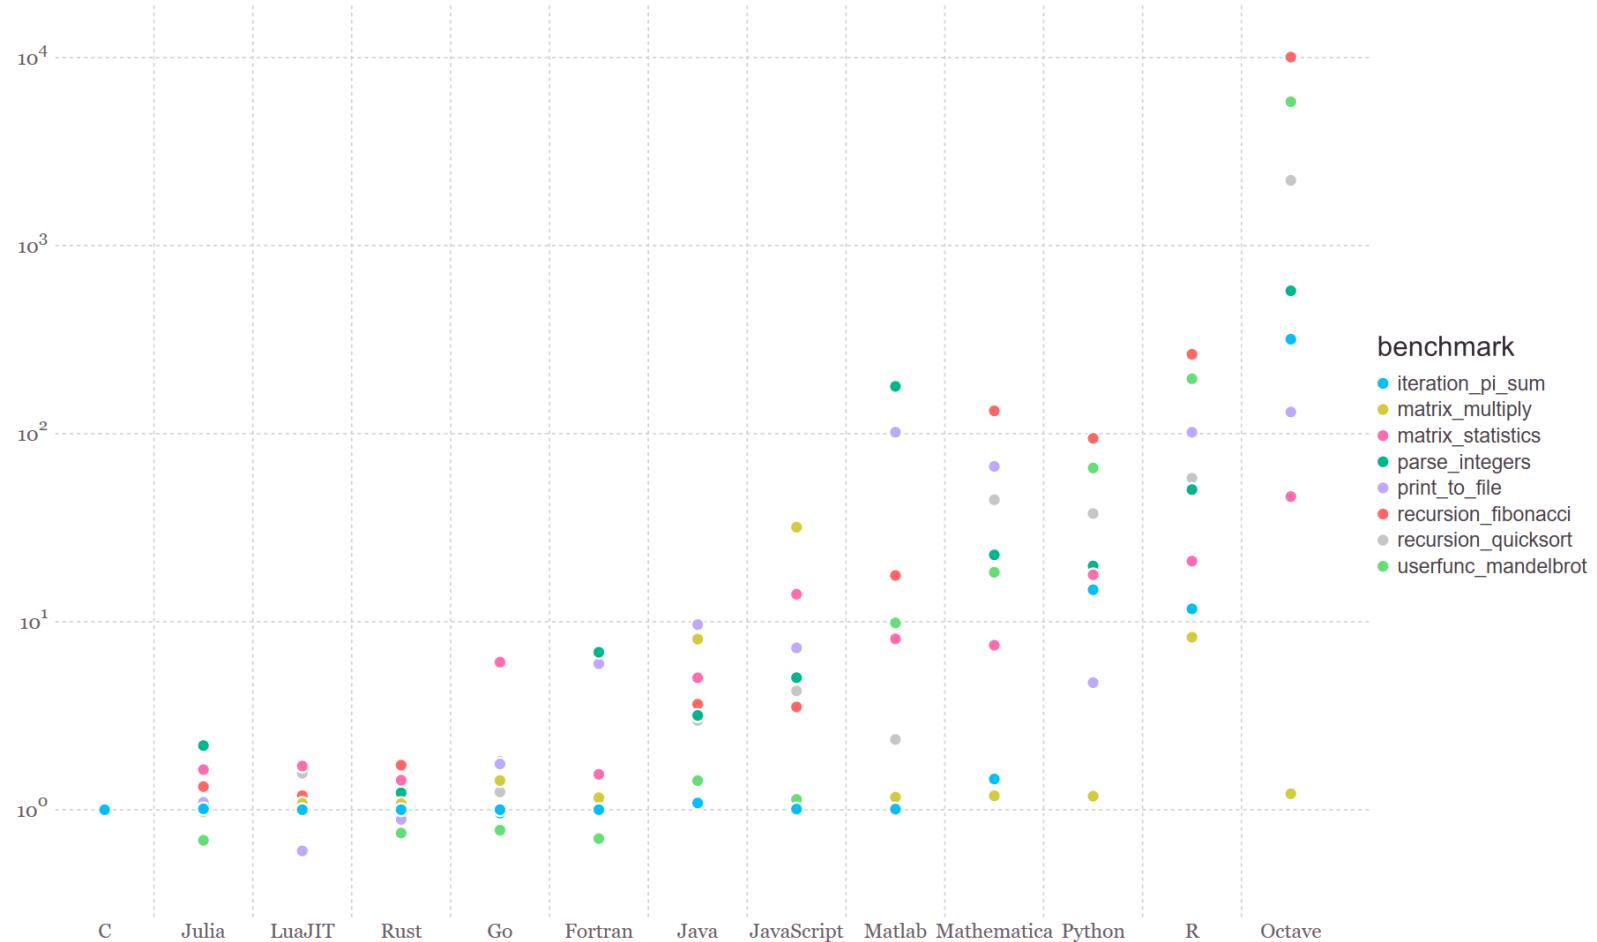

User

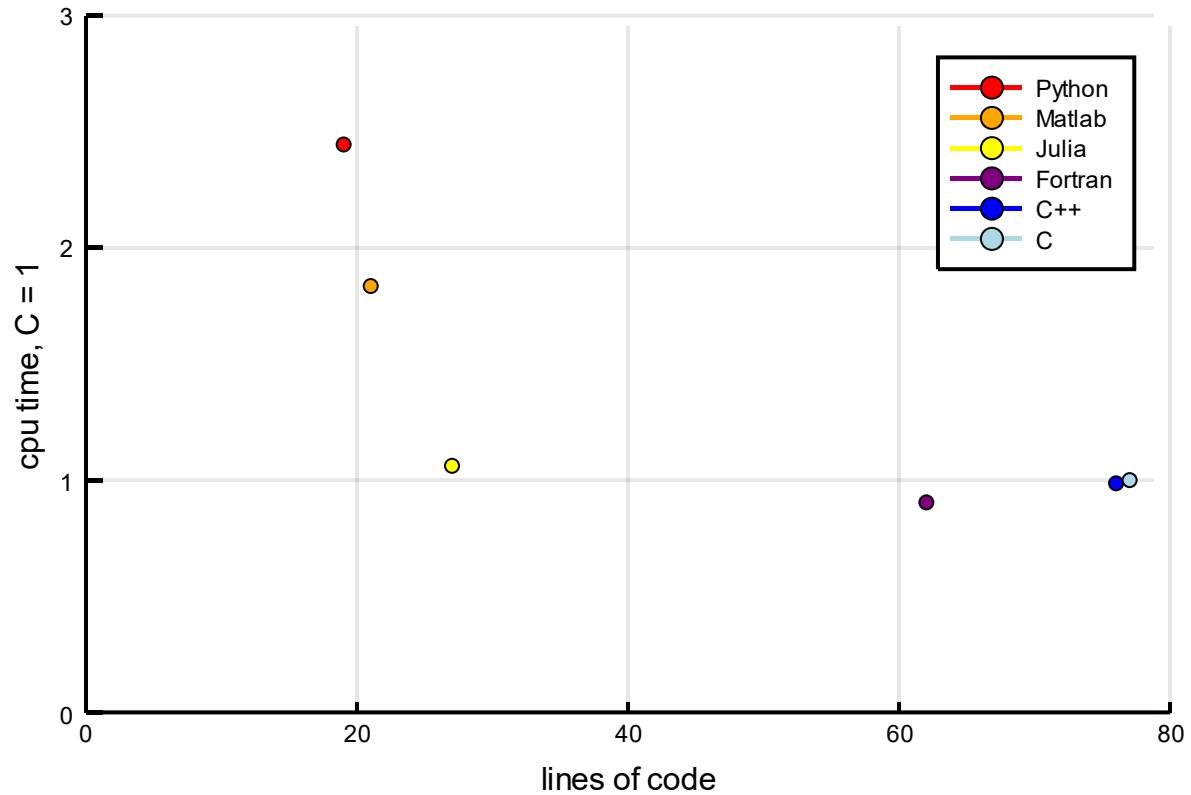

Developer

It is fast

It is expressive
